MUGA

The ultimate specialist asphalt sports surface

THE CHALLENGE

This sports club in Suffolk required three new sports pitches. The clients brief specified that the new surface needed to be able to withstand constant use for a range of sports including netball, basketball and football.

It also needed to be porous and free-draining to enable all-weather use and avoid surface water and ice.

OUR SOLUTION

ULTISPORT MUGA was recommended as a 6mm surface course with a specialist binder course. It offered a durable finish along with the free-draining performance required by the client.

The modified binder allowed good compaction and finish, even where hand-laying was required in between the sports pitches, where lack of access meant that a paving machine could not be used.

RESULTS AND BENEFITS

ULTISPORT MUGA was used to surface the entire area, including underneath the astroturf pitches as an alternative to an aggregate base. As planned, the porous surface and open aggregate structure of the binder course allowed rainwater to quickly drain and disperse, for extended playing time.

The smooth, even finish provided a sound playing surface, free from loose gravel, delivering the consistent playing performance that the client required.
