SINGLE LAYER

**Client** PRIVATE LAND OWNER  
**Main Contractor** TOPPESFIELD LTD  
**Location** CHURCH LANE, THWAITE, SUFFOLK  
**Completion** NOVEMBER 2014

# ULTIPHALT

## SINGLE LAYER

### *The ultimate resurfacing solution*

#### THE CHALLENGE

This rural road in Suffolk had deteriorated due to bad weather and frequent farm/plant traffic. As a result the road surface had become unsafe and full of potholes.

The entire lane had to be shut and traffic management was required due to the narrow roads used to get to it. The job needed to be done as quickly as possible to avoid any unnecessary delays or disruption to the public.

#### OUR SOLUTION

ULTIPHALT Single Layer was proposed using a 20mm aggregate to replace the surface and binder course in a single layer. Single layer resurfacing offered significant time savings, meaning reduced delays for residents and local road users.

The Existing surface course and some of the binder course was planed off to get a solid base. 140 tonnes of ULTIPHALT single layer was then delivered and machine laid in a single day.

#### RESULTS AND BENEFITS

Toppesfield were impressed with the speed with which they could complete the job and ease of having just one layer. The receiving course was not consistently level so having a thickness range of 50-100mm made their task of achieving a level surface easier.
