TOPFLOW
SCREED C BELITEX

Product Topflow Screed C Belitex
Client Select and Save
Sub-contractor SPR Construction Services
Location Station Road, Wythall
Date of completion April 2016

Tarmac's Topflow Screed C Belitex was the ideal solution to help get our store open before schedule - Select and Save

THE CHALLENGE

A new Select and Save store is currently under construction in Wythall, near Birmingham.

The existing floor area of 150m² required a screed topping ranging from 50 to 75mm to complete the floor construction.

With the end use of the project being a convenience store, the construction was very time critical to ensure trading could commence as soon as possible.

OUR SOLUTION

Tarmac's Topflow screed C Belitex is a cement based flowing screed that is easy to install and can accept floor covering at just 14-21 days.

SPR Construction Services are a partner of Tarmac and installed 8.5m³ of the new innovative Belitex product in just over 1 hour.

Thanks to the low shrinkage properties, Belitex can also be laid in large areas up to 250m² without requiring construction joints for crack control.

RESULTS AND BENEFITS

Tarmac's Topflow Screed C Belitex can be laid in thinner sections compared to traditional screeds allowing this job to be completed with no worries of the depths dropping to 50mm.

Ultimately, the shop can be opened sooner allowing the owners to start trading as soon as possible.

A traditional screed would require several months of drying before floor covering are laid whereas Tarmac's Topflow Screed C Belitex needs just 14-21 days.
